

ABOUT PROJECT

ANTIDOTE is a groundbreaking initiative aimed at enhancing the security and resilience of AI models in the smart healthcare sector. By addressing adversarial threats, it ensures trustworthy and safe AI-driven medical solutions, protecting sensitive healthcare data and improving patient outcomes

MAIN OBJECTIVE

The objective of the project is to create a sustainable European and intersectoral network of organizations working on a joint research programme in the interdisciplinary fields of Healthcare, AI and Cybersecurity. The participants will exchange skills and knowledge which will allow them to design and develop concrete mechanisms to evaluate the robustness of AI models and propose novel methods to ensure their secure, safe, resilient and trustworthy operation in the healthcare domain.
